

Simplifying Operational Security.

If keeping up with a variety of emerging regulations is a priority, Shavlik NetChk™ Compliance will help you easily manage critical system and security configurations. Built on Shavlik's proven scanning technology, Shavlik NetChk™ Compliance is a powerful solution that scans for, compares, and enforces security settings on your network. And the best part, it provides the reports you need to prove you're compliant.

New Editions

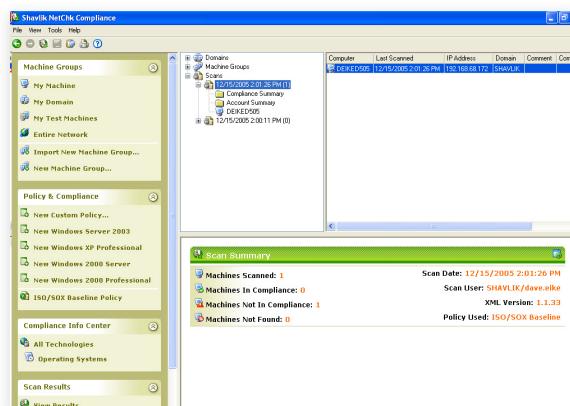

Shavlik NetChk™ Compliance – Audit Edition: provides all the functionality of the full edition including the ability to create, monitor and report on established policies, providing a comprehensive measure of the current state of your network.

Shavlik NetChk™ Compliance – Operations Edition: offers the complete set of features in the Full Edition, yet also provides comprehensive policy enforcement capabilities. Does not include the integrated ISO 17799 security framework, which is a standard feature in both the Full and Audit Editions.

Why choose Shavlik NetChk™ Compliance?

- ▶ **Learn why you use settings:** Best practices and a security knowledge base permit you to understand, implement, assess, or audit security on your systems. Even without using the scanning features, you'll understand why you secure your systems.
- ▶ **Linked security settings and regulatory audit:** Current regulations like SOX, GLBA, or HIPAA place new demands on information security that Shavlik NetChk™ Compliance addresses. Audit systems using the links between best practices content and the ISO 17799 auditing standard. Use the ISO 17799 links to provide your organization with powerful security standards to drive overall security policy.
- ▶ **Know your system security:** See your best practices and scanning information from many angles. Review by SOX auditing framework, machine grouping, settings summary, and setting details. Learn and grow your security using our best practices.

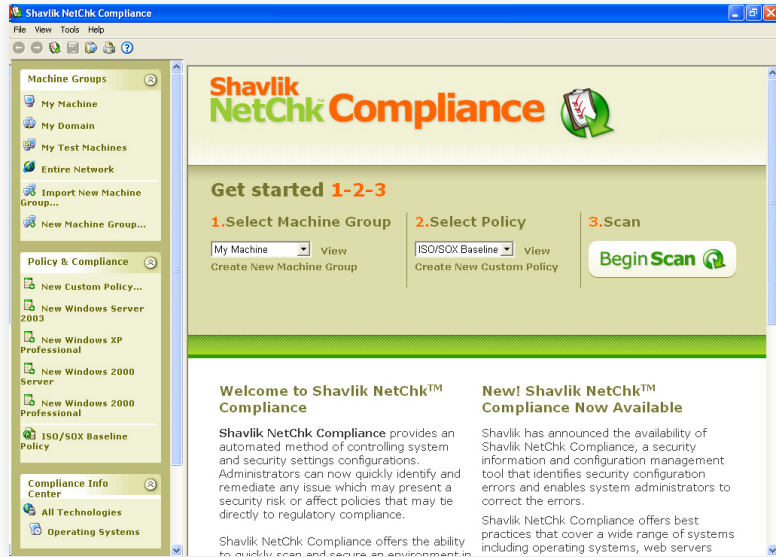

A powerful engine allows you to scan for, compare, or enforce security settings on your systems – Windows 2000, XP, and Windows Server 2003.

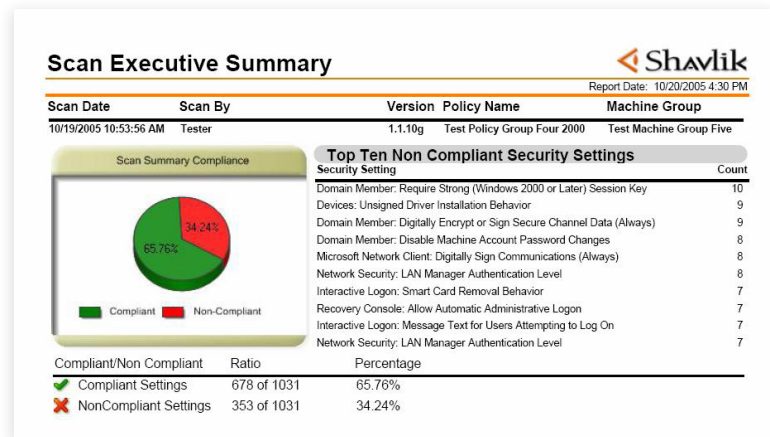

Powerful Features:

- ▶ Ease of use – get up and running in 30 minutes or less
- ▶ Security best practices from Shavlik's security consulting experts
- ▶ Settings recommendations based on real-world experience
- ▶ Content for securing operating systems, databases, and web servers
- ▶ Automated security configuration baseline development and enforcement
- ▶ Add custom comments to best practices
- ▶ Security auditing based on ISO 17799
- ▶ Future integration with other Shavlik products
- ▶ Data backend based on Shavlik HFNetChkPro™
- ▶ Content presents security standards, implementation, scripts, audit questions, and auditing standards
- ▶ Rationale explaining why a security measure is recommended
- ▶ Scheduled scanning and policy enforcement
- ▶ Find, compare, or enforce security settings on multiple systems
- ▶ View details of each security setting including local security policy information and .inf data
- ▶ Executive Reporting shows multiple views of scan results including machine, settings, and policy status.
- ▶ Over 230 Security settings

Shavlik NetChk™ Compliance provides a powerful engine to scan for, compare, or enforce security settings on your systems.

Executive Reporting allows you to easily view current compliance status.
